LATEST VERSION

v1.2

Apr 7, 2026

Two-bucket backing diversity after active taxonomy cleanup

Removed the standalone algorithmic bucket from the active backing taxonomy after reclassifying the remaining reserve-backed cases. Chain Health backing diversity now measures only the live RWA-backed vs crypto-backed split.

IMPACT SNAPSHOT

- Reclassified FPI, cUSD, and CEUR out of the legacy algorithmic bucket based on their reserve backing
- Active backing filters and taxonomy pages now expose only RWA-backed and crypto-backed cohorts
- Backing diversity now normalizes across the two active backing types, so an even RWA/crypto split scores 100

v1.2

Apr 7, 2026

Two-bucket backing diversity after active taxonomy cleanup

Removed the standalone algorithmic bucket from the active backing taxonomy after reclassifying the remaining reserve-backed cases. Chain Health backing diversity now measures only the live RWA-backed vs crypto-backed split.

v1.1

Mar 16, 2026

Chain environment factor and weight rebalance

Added a fifth health factor — Chain Environment — that rates chain infrastructure quality via a resilience tier system. Rebalanced weights to reduce backing diversity influence and give chain quality 20% of the composite.

- New Chain Environment factor (20% weight): tier 1 = 100 (Ethereum), tier 2 = 60 (default), tier 3 = 20 (PulseChain, Harmony, etc.)
- Backing diversity weight reduced from 15% to 10%
- Quality weight reduced from 35% to 30%
- Concentration weight reduced from 25% to 20%

Details

v1.0

Mar 16, 2026

Reconstructed

Initial Chain Health Score release

Launched per-chain health scoring with four factors: quality (35%), concentration (25%), peg stability (25%), and backing diversity (15%). Exposed via /api/chains and the /chains/ leaderboard.

- Introduced chain health score as a 0–100 composite across four factors
- Quality: supply-weighted average of Pharos Safety Scores (null if < 50% coverage)
- Concentration: HHI-based metric rewarding stablecoin diversity
- Peg stability: supply-weighted peg proximity across all chain stablecoins
